A STREAMLINED APPROACH FOR LOWER EXTREMITY EMBOLIC PROTECTION.

PACKAGE INCLUDES: (1) Delivery Catheter with Pre-Loaded Filter, (1) Retrieval Catheter (1) Syringe with Flushing Tip (5 cc)

WIRION® is indicated for use as an embolic protection system to contain and remove embolic material (thrombus/debris) while performing atherectomy in calcified lesions of the lower extremities. The diameter of the vessel at the site of filter basket placement should be between 3.5mm to 6.0mm. WIRION may be used with commercially available 0.014" guide wires.

Caution: Federal law (USA) restricts this device to sale by, or on the order of, a physician.

THE POWER OF CONSTANT PROGRESS.

For more information, please contact your local CSI representative or call customer service at 1-877-274-0901.
The WIRION® Embolic Protection System is designed for simple setup and deployment during peripheral vascular interventions. The WIRION filter comes pre-loaded in the rapid exchange delivery catheter and fits vessels ranging from 3.5 – 6.0 mm. It can be deployed anywhere on any 0.014" guidewire for optimal flexibility. Its uniform 120μ pore size provides continuous blood flow while maintaining embolic capture efficiency. Plus, its universal design works with multiple atherectomy devices.

- **Pre-loaded in delivery catheter**
  Reduces setup time, requiring only a simple flush with the included 5 cc syringe

- **Secures onto any 0.014" guidewire**
  Provides freedom to select the optimal guidewire for the procedure

- **One size for quick selection**
  Single adaptable filter for vessels ranging 3.5 – 6.0 mm

- **Deploy anywhere on the 0.014" guidewire**
  Provides complete control over filter positioning without compromising wire support and stability

- **Uniform 120μ pore size**

- **Compatible with multiple atherectomy devices**
  Removes constraints around product selection and compatibility

- **Retrieval catheter with retractable tip technology**
  Ensures smooth deliverability when retrieving the filter
